DETAILED ACTION

1. This Office Action is in response to the Amendment filed 01/22/2008. Claims 3-4, 10, and 13-18 were canceled and claims 1-2, 5-9, and 11-12 are now pending.

Allowable Subject Matter

2. Claims 1-2, 5-9, and 11-12 are allowed.

3. The following is an examiner's statement of reasons for allowance:

The present claims are allowable over the closest references: Ames (US 4,159,287), Kehe et al. (US 3,616,047), Templeton et al. (US 6,310, 134 B1), and Hohner (US 5,998,547).

Summary of claim 1:

A method for producing a modified propylene homopolymer, the method comprising:		
modifying a propylene homopolymer with a radical initiator and an organic acid		
wherein the propylene homopolymer satisfies the conditions of		
	a	<u>mmmm = 20 to 60 mol%</u> ;
	b	$[rrrr / (1-mrnmm)] \leq 0.1$;
	c	$rmm > 2.5 \text{ mol}\%$;
	d	$mm \times rr / (mr)^2 \leq 2.0$; and
	e	a weight ratio (W25) of components eluted at 25°C or lower in a temperature programmed chromatography is 20 to 100% by weight.

Summary of Claim 9:

A <u>modified propylene homopolymer</u> obtained by the method according to claim 1.
--

Ames discloses a method to modify an amorphous polypropylene, comprising a step of reacting the amorphous polypropylene with at least one unsaturated alkyl carboxylic acid component in the presence of a free radical initiator to provide the modified amorphous polypropylene (initiator: col. 2, lines 1-10; acid component: col. 2, lines 64-68; col. 3, lines 1-9; claims 1-2). However, Ames does not teach or fairly suggest the claimed modified propylene homopolymer and the claimed method to produce the modified propylene homopolymer, wherein the propylene homopolymer has mmmm being 20 to 60 mol% and other claimed properties.

Kehe et al. disclose a method to modify an atactic polypropylene, comprising a step of reacting maleic anhydride with a solution of the polypropylene in an organic solvent containing a free radical producing material, wherein the free radical producing material is dibenzoyl peroxide, dilauroyl peroxide, dicumyl peroxide, or t-butyl perbenzoate (col. 3, lines 27-57). However, Kehe et al. do not teach or fairly suggest the claimed modified propylene homopolymer and the claimed method to produce the modified propylene homopolymer, wherein the propylene homopolymer has mmmm being 20 to 60 mol% and other claimed properties.

Templeton et al. disclose a method to modify polypropylene homopolymer, comprising grafting an amorphous polypropylene homopolymer with one or more unsaturated carboxylic acids selected from the group consisting of acids, esters and anhydrides in a solvent selected from the group consisting of ester solvents, ketone

Art Unit: 1796

solvents, aliphatic solvents, aromatic solvents and mixture thereof (the unsaturated carboxylic acid: claim 2; claim 1). Templeton et al. further disclose that a radical initiator can be used in the modification process (col. 4, lines 32-33). However, Templeton et al. do not teach or fairly suggest the claimed modified propylene homopolymer and the claimed method to produce the modified propylene homopolymer, wherein the propylene homopolymer has mmmm being 20 to 60 mol% and other claimed properties.

Hohner discloses a method to modify a partially crystalline polypropylene homopolymer wax having both softening point and melting point, comprising reacting the polypropylene homopolymer wax with an α , β -unsaturated carboxylic acid or a derivative thereof in the presence of free-radical formers, wherein the polypropylene wax has been prepared by direct polymerization of propylene using catalysts of the Ziegler or metallocene catalyst (claim 1). However, Hohner does not teach or fairly suggest the claimed modified propylene homopolymer and the claimed method to produce the modified propylene homopolymer, wherein the propylene homopolymer has mmmm being 20 to 60 mol% and other claimed properties.

In light of the above discussion, it is evident as to why the present claims are patentable over the prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
